Abstract (en)
[origin: WO2017029351A1] The invention relates to a therapy device (1) for treating left-side or right-side parts of the body, comprising a one-piece base plate (2) with a left-side surface (21) and a right-side surface (22), a moving segment (3) with a support surface (31) for a left- or right-side part of the body to be treated, and a drive (4) for pivoting the moving segment (3) back and forth relative to the base plate (2). The moving segment (3) is secured on the base plate (2) such that it can pivot about an axis of rotation. The left-side surface (21) of the base plate (2) is formed for supporting a left-side section of the body assigned to a left-side part of the body to be treated. The right-side surface (22) of the base plate (2) is formed for supporting a right-side section of the body assigned to a right-side part of the body to be treated.
