Abstract (en)
[origin: WO2020012850A1] A balloon catheter 10 that comprises, at a tip-end side, a balloon 13 that can expand and contract. The balloon 13 has: a straight tube section 13c at which the diameter of the balloon 13 becomes greatest during expansion; and a tip-end-side cone section 13d that narrows toward the tip-end side from a tip-end part of the straight tube section 13c. A linear protruding part 30 that extends linearly along the axial direction of the balloon 13 is provided to an outer surface of the balloon 13. The linear protruding part 30 includes: a first protruding part 31 that is arranged on the straight tube section 13c; and a second protruding part 32 that is arranged on the tip-end-side cone section 13d. Over the entire longitudinal-direction length of the second protruding part, the height H2 to which the second protruding part 32 protrudes from the outer surface of the balloon 13 is greater than the height H1 to which the first protruding part 31 protrudes.
