Abstract (en)  
[origin: WO2021053011A1] The invention relates to a warp knitting machine (26) which allows the successive production of batches of warp-knitted fabric with compositions of different diversity on a single warp knitting machine (26). For this purpose, a relative position of the lever shaft (3), by means of which at least one guide bar (8) can be driven, can be adjusted relative to the further lever shafts (4, 5, 6), by which in each case at least one further bar can be driven, in the direction of the machine height (y) and/or in the direction of the machine depth (x).
