Abstract (en)
[origin: JP2021045940A] To provide an image formation apparatus which can ensure the flatness of a belt member with a simple configuration.SOLUTION: An image formation apparatus comprises: an endless belt member; an image formation part which is arranged so as to face the belt member and forms an image in an image formation region facing the belt member; a support member which extends in the width direction of the belt member and supports the entire width direction of the belt member at a spot corresponding to the image formation region of the belt member; and a pulling part which pulls the end of the support member toward the outer side of the belt member.SELECTED DRAWING: Figure 3
