Abstract (en)

[origin: WO2020015948A1] The invention relates to, inter alia, a method for operating a first and a second vehicle (11, 12). According to the invention, it is checked on the vehicle side, it is checked whether a new coupling with another vehicle has occurred, and after establishing a new coupling, a respective configuration signal (A) signalling the coupling status is transmitted to a track-side switching unit (20), and if there is a configuration signal (A) of the first vehicle (11) and a configuration signal (A) of the second vehicle (12), a communications connection (200) is established between the two vehicles (11, 12) via the track-side switching unit (20) or an already existing communications connection (200) between the two vehicles (11, 12) is reconfigured.
