Abstract (en)

[origin: WO2020127794A1] The invention relates to a garment steamer (100) for treating a garment, the garment steamer (100) comprising a base (103), at least one pole (104) extending from the base (103), an ironing board (120) fixed compared to the at least one pole (104) for supporting the garment during treatment, and a hanger (110) for hanging the garment (20) during treatment. The garment steamer (100) also comprises a first coupling element (111) for allowing the hanger (110) to operate a left/right movement along a first horizontal axis (A1) compared to the ironing board (120). This solution provides the user with the ability to adjust the position of a garment with respect to the ironing board in an easy and versatile way, allowing to steam and/or iron the whole area of garments of different sizes, widths, lengths and types with no need to interchange pieces on the steamer.
