Abstract (en)

[origin: KR20200047311A] The present disclosure relates to an artificial intelligence (AI) system utilizing a machine learning algorithm such as deep learning and an application thereof. A method for performing voice recognition by voice recognition devices in space with the multiple voice recognition devices may comprise the steps of: extracting a voice signal of a speaker from an input audio signal; obtaining a first speaker recognition score representing similarity of the voice signal and a voice signal of a registered speaker; and outputting a voice recognition result for the voice signal based on a second speaker recognition score and a first speaker recognition score obtained by another voice recognition device among the multiple voice recognition devices.
