Abstract (en)

[origin: WO2019224738A1] The invention is a new adapter for industrial electrical sockets, comprising a main body (A) provided with pins suited to be inserted in an industrial socket, a centre body (A3) comprising a socket (A5) provided with holes according to the civil construction standards, at least two half shells (B1, B2) suited to contain a plug (S) of the type used in civil buildings and comprising coupling devices (BC1, BC2) for coupling them to said centre body (A3) and an opposite terminal threaded portion (BF1, BF2) suited to interact with a tightening element, which in turn comprises at least two parts (C1, C2) that are internally threaded (CF1, CF2) and connected or suited to be connected to each other in such a way as to form a tightening element (C) in the shape of a dome or cap.
