Abstract (en)

A marking instrument for toilet hygiene comprising: a hand deformable barrel containing a flowable hygiene solution; and a nozzle having a conduit therethrough terminating in a nozzle outlet for directing the solution on to a surface, the conduit being in communication with an outlet of the hand deformable barrel; and a standoff member extending a distance beyond the nozzle outlet; wherein in use the standoff member is brought against a surface for the flowable hygiene solution to be dispensed upon, whereby upon squeezing the hand deformable barrel the solution flows through the conduit and out of the nozzle outlet to be deposited on the surface for marking, the standoff member maintaining a distance between the nozzle outlet and the surface for assisting uniform deposition of the hygiene solution upon the surface.
