Abstract (en)
[origin: CN112553772A] The invention relates to a method for threading after warp beam replacement in a warp knitting machine (1), comprising the following steps: connecting an old warp thread, which passes through eyelets(9) of eyelet needles fastened to a guide bar of the warp knitting machine (1) and forms a knitted fabric pulled into a fabric pulling device (3) of the warp knitting machine (1), to a replacement warp thread (12) belonging to a warp beam newly replaced into the warp knitting machine (1); threading the replacement warp yarn by pulling the knitted fabric by the fabric pulling device (3) so that the old warp yarn pulls the replacement warp yarn through the eyelets (9) of the eyelet needles (8); and in the threading process of warp replacement, rotating a warp beam by means of a warp beam driving device of the warp knitting machine (1), so that the replaced warp is actively released through the warp beam. The invention also relates to a warp knitting machine (1) having a threading function after the warp beam is replaced for carrying out the above method.
