Abstract (en)
Disclosed is a footwear product (1) comprising a top member (10) and a base member (20), wherein the top member is adapted to receive a foot and further exhibiting a bottom side (14) and an upper side. The base member comprises a bottom side (24) and an upper side (23) and a platform height (h) between the bottom side and the upper side, wherein the bottom side is adapted and configured to contact a ground. The footwear product is adapted and configured to be functionally assembled from at least the top member and the base member, wherein the upper side of the base member is oriented towards the bottom side of the top member, whereby a connection interface is provided between the base member and the top member when the footwear product is functionally assembled. Connection means (31, 34) are provided at the connection interface to connect two members adjacent the connection interface. The connection interface with the connection means is adapted and configured such that the connection interface is reversibly and non-destructively separable by a moment applied at the connection interface when said moment is above a threshold moment. The threshold moment is larger than or equal to 0.5 Nm and smaller than or equal to 30 Nm.
