Abstract (en)

[origin: WO2019229559A1] The invention relates to a folding clasp for a wrist watch comprising a first bracket (3) and a second bracket (4), wherein the first bracket (3) has a first securing mechanism (6) for securing a wristband or a watch housing of the wrist watch, wherein the second bracket (4) has a second securing mechanism (7) for securing the wristband (2) of the wrist watch, wherein the first bracket (3) and the second bracket (4) are moveably connected to one another, such that the first and the second brackets (3, 4) can be moved relative to one another between an open state and a closed state of the folding clasp (1), wherein the folding clasp has a locking mechanism (9) in order to retain the first and the second brackets (3, 4) in the closed state, wherein the second securing mechanism (7) has a protruding pin (74) which is designed to be guided through the wristband (2) in order to secure the wristband in various axial positions in the second securing mechanism (7), wherein the second securing mechanism (7) has a blocking means (8) which is designed to retain the distal end of the pin (74) guided through the wristband (2) such that the wristband is blocked on the pin (74) in the open state of the folding clasp (1).
