Abstract (en)

[origin: WO2019233619A1] The invention relates to a single-use or disposable tool for installing or positioning a sealing element in a sealing position. The sealing element may be positioned in or used in connection with a motorized vehicle, the sealing element may e.g. be an oil seal such as an oil seal around a crank shaft. The disposable tool comprises an opening (5) having an inner perimeter (PI), a first end (1), a second end (2) and a first contact part (3) having an outer perimeter (PO) positioned between the first end (1) and the second end (2). The first contact part (3) fits into the opening (5) of the sealing element having the inner perimeter (PI) i.e. the outer perimeter (PO) of the first contact part (3) is smaller than the inner perimeter (PI) of the opening (5), and the outer perimeter (PO) of first contact part (3) is variable, and the tool has a thickness of between 0.1 - 1.2 mm and is made of a transparent material.
