Abstract (en)

[origin: WO2019234135A1] The invention relates to a torque transmission device (1), comprising: - a torque input element (2), - a first torque output element (3), - a rotating electric machine (12) comprising a rotor (13), - an intermediate element (5) defining a rotor support, - an actuating member (40) with a rotating stop, associated with the input clutch (10), - a protective casing (46) arranged to at least partially envelop the torque input element (2), the torque output element (3), the rotating electric machine (12), the intermediate element (5) and the actuating element (40), and - at least one rolling bearing member (47) arranged radially between the intermediate element (5) and the protective casing (46), in which the input clutch (10), the actuating member (40) associated with the input clutch (10) and the at least one rolling bearing member (47) succeed one another radially towards the axis (X).
