Abstract (en)

[origin: WO2019234317A1] The invention relates to a device for packaging at least one first and one second fluid, comprising an assembly consisting of a first container for containing a first fluid and a second container for containing a second fluid, in which the first container is substantially in the form of a tube, preferably in the form of a tube which has a first end provided with a distributor and a second end designed such that said second container can be attached to said second end, thereby closing said second end of the first container, and in which the second container is substantially in the form of a tube, preferably in the form of a tube which has a first end designed to be attached to the second end of the first container, said first end of the second container being closed by means of a tearable wall, and the second end thereof being closed by means of a movable wall, the movable wall being designed to move in the direction of the tearable wall in order to open the tearable wall and thereby allow the first and second fluids to mix.
