Abstract (en)

[origin: WO2019228718A1] The invention concerns a tap comprising: - a body (16) that has a bore (20) - a stopper (24) movable in translation between a first position, corresponding to the closed state of the tap, and a second position, corresponding to the open state of the tap, - a dismountable spout (26), - a coupling system (90), configured to link the stopper (24) and the spout (26), comprising a male part and a female part allowing them to be interlocked with each other in an interlocking direction, perpendicular to the axis (A20) of the bore (20), when the stopper (24) is in the first position, and to be immobilised relative to each other in the direction of movement (DD) of the stopper (24) when the male and female parts are coupled.
