Abstract (en)

[origin: WO2020048653A1] The invention relates to a door handle arrangement (3) having a handle carrier (10), a grip (4), a baseplate (11) and a bearing lever (14), wherein the grip (4) is movably mounted on the baseplate (11), and the baseplate (11) is mounted via the bearing lever (14) on the handle carrier (10) so as to be movable between a rest position and a working position. A bearing lever block (22) is mounted on the handle carrier (10) so as to be movable at least into a blocking position, in which the bearing lever block (22) engages with the bearing lever (14) and blocks a movement of the bearing lever (14) out of the retracted position and into a release position, in which the bearing lever block (22) is out of engagement with the bearing lever (14).
