Abstract (en)

[origin: WO2019228668A1] The invention relates to a shutter device (3) comprising a box (9), a screen (2), a winding tube, first and second lateral slides (6a, 6b), a motorised drive device, and an electrical connection device (31). The motorised drive device comprises an electromechanical actuator and an electrical energy storage device. The electromechanical actuator is configured to wind and unwind the screen (2) in relation to the winding tube, between a wound position and an unwound position. The electrical energy storage device is configured to power the electromechanical actuator. The winding tube, the motorised drive device and the electrical energy storage device are disposed inside the box (9). The electrical connection device (31) is disposed between one of the first and second lateral slides (6a, 6b) and the box (9), in the assembled configuration of the shutter device.
