Abstract (en)  
[origin: US2019368299A1] An apparatus and method for blowout preventer (BOP) control. The apparatus may include a first control station communicatively connected with and operable to control BOP equipment for controlling pressure within a wellbore at an oil and gas wellsite, and a second control station communicatively connected with and operable to control drilling rig equipment for drilling the wellbore within a subterranean formation at the oil and gas wellsite. The second control station may be communicatively connected with the first control station and operable to control the BOP equipment via the first control station.
