Abstract (en)
[origin: WO2019234179A1] The invention relates to a wind power plant comprising a rotor which can be rotated about a rotor axis and has a plurality of rotor blades, and a drive train (1) which is connected rotatably to said rotor and has a rotor shaft (2), wherein the drive train (1) is mounted on a machine carrier (7). The rotor shaft (2) has a locking ring (21) which is aligned coaxially with it and has at least three locking depressions (22) on its outer circumference. The machine carrier (7) has at least three locking bolts (10), which are displaceable and are oriented radially with respect to the rotor shaft (2), for the selective simultaneous engagement into in each case one locking depression (22) of the locking ring (21).
