Abstract (en)

[origin: WO2019228584A1] The subject matter of the invention is an electrical drive unit (1) for motor-vehicle applications, having a housing (4) comprising a housing shell (5) and at least one housing cover, an electric motor (8), wherein the electric motor (8) is accommodated in the housing (4), at least one transmission unit (7) which is in engagement with the motor (8), wherein a drive component, in particular a Bowden cable, can be moved by means of the transmission unit (7), and an electrical contact-making arrangement for the motor, wherein the electrical contact-making arrangement can be designed as a flexible conductor track structure (9), so that a relative movement (P) between the motor (8) and the housing (4) can be compensated.
