Abstract (en)
[origin: WO2019223894A1] The invention relates to a transport box (1), in particular for partially prepared meals and food, comprising a receiving compartment (2) limited by lateral walls and a base (22), and which can be sealed by a cover (3). The cover (3) has a coolant compartment (33) for receiving a coolant (200). The cover (3) can be arranged in two different cover positions (13, 23) sealing the receiving compartment (2). In addition, a channel device (9) is arranged in the receiving compartment (2) for conducting the coolant. The channel device (9) is designed and suitable for conducting the coolant in such a way that the temperature in the receiving compartment can be controlled to a deep-freezing temperature below 0 °C in a first cover position (13) and to a refrigeration temperature above 0 °C in a second cover position (13).
