Abstract (en)
[origin: WO2020025122A1] The present invention relates to the field of task parallelization and multi-threaded runtime environments. The present invention in particular relates to thread synchronization and scheduling in multithreaded applications, and thus provides a device 100 for serializing access to a shared resource 101, wherein the device 100 is configured to operate a thread 102 to execute a light-weight process, LWP, 103; probe access by the LWP 103 to the shared resource 101, and, if the shared resource 101 is locked; push the LWP 103 to a delegation queue 104.
