Abstract (en)

[origin: WO2019228881A1] The invention relates to a stator (3) of an electrical machine (1), comprising a stator winding (4) with a plurality of coils (5), the coils (5) being interconnected by means of connecting conductors (7). A temperature sensor (10) is arranged on a connecting conductor (7) and is in thermal contact with same for the detection of a temperature. According to the invention, two parallel current paths (71, 72) are formed on the connecting conductor (7), the temperature sensor (10) being arranged on one of the current paths (71).
