Abstract (en)
[origin: EP3804549A1] The present invention relates to a swimsuit that is made of a stretchable fabric and covers at least a portion of the thighs and the hips when worn, wherein two or more band-like tightening portions are arranged so as to extend in the body length direction from each of the left and right hips to the corresponding thigh such that the tightening portions intersect each other, and the intersection of the two or more band-like tightening portions is located between the top of the hip and proximal 1/3 of the hamstrings. Thus, a swimsuit is provided that can stabilize the posture in water and support the movements of the hamstrings.
