Abstract (en)

The present invention relates to a system for anchoring a wall-cupboard element to a wall, i.e. furniture cantilevered from a wall at a certain height from the floor. More specifically, the anchoring system according to the present invention is specifically designed for anchoring elements commonly called "bases" to a wall, and is therefore part of those devices that are known in the field as "base brackets". According to the invention, the anchoring system (1, 1', 1'') for anchoring a wall cupboard to a wall, in particular a base (100), comprises a pair of supporting devices (10) each comprising a plate-like body (10') configured for being connected to the inner face of one of the shoulders (101) of said base (100), and is characterized in that it also comprises at least one connection bar (40, 40', 40'') which connects said supporting devices (10) together by means of connection means (11a, 11b, 24a, 24b, 26a, 26b, 30, 30', 38, 39) and which also comprises in correspondence with its longitudinal edge at least one housing seat (41, 41', 41'') in which an elastic insert (50) is housed, preferably produced by the extrusion of a plastic material, which has an upper surface (51) configured for forming a supporting surface for an element or accessory positioned for the upper closure of the furniture (100).
