Abstract (en)
[origin: CN112650040A] The invention relates to a screw-down orientable crown (200) for a watch case (100), including a tube (11) that can be axially inserted into a case housing (90), and a handling body (1) including a pattern (19) and a protrusion (15) extending axially and, in the coupled position, cooperating for indexing the pattern (19) relative to the case (100) with a complementary protrusion (55) that a fixed pipe (5) includes which is pushed back from the body (1) by a spring (12) trapped therebetween, and, in the disconnected position, by compression of the spring (12) remaining axially distant from the complementary protrusion (55) and without cooperation therewith, and including an axial stop means (3).
