Abstract (en)

[origin: WO2019239079A1] The invention relates to a cleaning device comprising a handle (1), a cleaning head (4) including a plate equipped with a fringe (5), and a chamber (2) for receiving a cleaning liquid, characterized in that: - the chamber (2) is configured to receive a container (3) of cleaning liquid, i.e. a pouch containing the cleaning liquid, the perforation chamber being provided with a cutter (34) configured to be able to perforate the pouch when the container is fitted in the chamber in order to release the cleaning liquid; - the device comprises a flow duct (6) for the cleaning liquid to flow from the perforation chamber (2) to the cleaning head (4), - the cleaning head (4) comprises an upper wall connected to the flow duct (6) and a lower wall provided with one or more holes allowing the cleaning liquid to pass through the plate in order to impregnate the fringe.
