Abstract (en)  
[origin: WO2019239058A1] Disclosed is a fluid product dispensing device comprising a body (10), a receptacle (20), in particular made of glass, said receptacle having a neck, a dispensing member (30), such as a pump or a valve, which is mounted on the receptacle (20), a lateral actuation system (40) that is securely connected to the body (10), said lateral actuation system (40) comprising a lever (42) that is pivotably mounted on the body (10), the device further comprising at least one transverse projection (55) which is formed directly on the receptacle (20), is located on or below the neck of the receptacle and cooperates with the lateral actuation system (40), in particular the lever (42), during actuation, the receptacle (20) having two parallel transverse projections (25) which extend symmetrically from either side of the receptacle (20) and between which a radial cavity (24) is defined, said radial cavity (24) cooperating with the body (10) to axially guide the receptacle (10) during actuation.
