Abstract (en)
[origin: WO2019238731A1] The invention relates to a device (2) for conveying flexible tubular items (10), comprising a first and at least a second transfer element (4, 4') for transferring the flexible tubular items (10), wherein: transfer of the flexible tubular items (10) comprises at least receiving a flexible tubular item (10) at a receiving position (6) and subsequently delivering it at a delivering position (6'); the transfer elements (4, 4') are movable along a predefined path (12) independently of one another inside the device (2); and the transfer elements (4, 4') are arranged inside the device (2) and/or arranged movably such that the acceleration exerted on the flexible tubular items (44) can be minimised when the flexible tubular items (10) are received and/or when the flexible tubular items (10) are subsequently delivered.
