Abstract (en)

[origin: WO2019238264A1] The invention relates to a storage device (10) for storing sheet-type elements (P) in piles in a shaping machine (1), the storage device (10) comprising: a movable storage surface (11) and an actuating device (12) for moving the storage surface (11) between a retracted position and a vertical front position in an alternating back-and-forth movement for storing the sheets in a pile, and between the retracted position and a stowed position for freeing the access to the pile of sheet-type elements (P), characterised in that the actuating device (12) comprises cam means for moving the storage surface (11) upwards into the stowed position, in an upper position intended to be located above the top of the pile of sheets. The invention also relates to a machine for shaping sheet-type elements, comprising at least one such storage device.
