Abstract (en)

[origin: WO2019239014A1] The disclosed solution relates to an apparatus removably arrangeable in a work machine and a method for collecting material. The apparatus comprises a body (2) which forms a collection container (1) for receiving material and a negative pressure unit (4), fixed to the body (2), to create suction. The apparatus further comprises in the body (2) an adjustable nozzle opening (3) through which the negative pressure unit (4) is arranged to suck material into the collection container (1), and through which nozzle opening (3) material is removed from the collection container (1). The apparatus additionally comprises a closing and opening mechanism (5) arranged to the nozzle opening (3).
