Abstract (en)
[origin: WO2019238439A1] The invention relates to a screw (1), in particular a wood screw, having a countersunk head (4) with the shape of two truncated cones. The invention proposes that front edges (9), as viewed in a direction of rotation during screwing in, are formed by milling pockets (7) having a curvature in the direction of rotation during screwing in, with the result that the milling pockets (7) are extended in the circumferential direction, with the result that an engagement of cutting edges (8) in, for example, wood is improved.
