Abstract (en)

[origin: WO2019238421A1] The invention relates to an appliance combination of domestic appliances (10, 11, 12, 13, 14), comprising at least one cooking device (10, 11) and at least one fume extraction device (12, 13, 14). The appliance combination (1) is characterized in that the appliance combination (1) has at least two fume extraction devices (12, 13, 14) and at least one communication module (20, 21, 22, 26), and each fume extraction device (12, 13, 14) is at least temporarily connected to at least one cooking appliance (10, 11) of the appliance combination (1) via at least one of the communication modules (20, 21, 22, 26). One processing unit (23, 24, 25, 27), which is at least temporarily connected to at least one of the communication modules (20, 21, 22, 26), stores an algorithm, by means of which at least one fume extraction device (12, 13, 14) of the appliance combination (1) is at least temporarily actuated on the basis of the operating state of at least one cooking appliance (10, 11) of the appliance combination (1). The invention additionally relates to a method for operating at least one fume extraction device (12, 13, 14) of an appliance combination (1) and to a computer program relating thereto.
