Abstract (en)

[origin: WO2019243694A1] The invention relates to the communication between electronic systems (10, 11) in an aircraft subsassembly, such as a propulsive assembly (1). According to the invention, said communication is at least partially performed by light signals transmitted through at least one internal space (1A) of the subsassembly, said internal space defining an optical channel. To this end, at least one of these systems (10) comprises an emitter (20) arranged so as to emit a light signal and to modulate it according to data to be transmitted generated by this system (10), and at least one other of these systems (11) comprises at least one receiver (31) for receiving said light signal.
