Abstract (en)
Table comprising a round extendable table leg (2) for supporting a table (1), comprising telescopically extendable tubes (6, 7, 8) with a circular cross-section, which tubes (6, 7, 8) fit into each other and which tubes (6, 7, 8) comprise in their interior a spindle (4) for displacing the tubes (6, 7, 8) with reference to each other for placement of the tabletop (1') at a desired height, wherein the table leg (2) further comprises a ground-base (5) that extends at right angles with respect to the telescopically extendable tubes (6, 7, 8), wherein the spindle construction (4) provided within the telescopically extendable tubes (6, 7, 8) with a circular cross-section comprises telescopically extendable tubes (12, 13) with a rectangular cross-section, and that the spindle (4) with the telescopically extendable tubes (12, 13) with the rectangular cross-section are placed in the interior of the telescopically extendable tubes (6, 7, 8) with the circular cross-section, wherein the telescopically extendable tubes (6, 7) with the circular cross-section are rotationally fixed with a connection to the telescopically extendable tubes (12, 13) with the rectangular cross-section, and wherein a lowest tube (13) with the rectangular cross-section is rotationally fixed to the ground-base (5).
