Abstract (en)

[origin: CN214199343U] One aspect of the utility model relates to a food receiving container (8) for a household refrigeration appliance (1), which is provided with a supporting shell (10) for receiving food and a top cover (9) separated from the supporting shell (10), the top cover can be placed on the supporting shell (10) in order to close the supporting shell (10), and the food receiving container is provided with a ventilation device (12) which is arranged on the supporting shell (10). A ventilation device (12) is provided, by means of which an air exchange between the surroundings and the interior (13) of the food receiving container (8) can be carried out, the ventilation device (12) having a pivotable flap (19) which opens a ventilation opening of the ventilation device (12) in an open position and closes the ventilation opening in a closed position, the flap (19) is mounted on the carrier housing (10) in a pivotable manner. The utility model also relates to a household refrigeration appliance (1).
