Abstract (en)
[origin: WO2019241812A1] The invention relates to a hair replacement piece (1) consisting of a substantially oval or polygonal textile fabric (2) having incorporated replacement hairs, which hair replacement piece in the region of its edging has a localised peripheral thread (3) that can be secured to the natural hair by hot melt gluing. In order to improve the fit and extend the length of time between the intervals at which the hair replacement must be secured, at least one further fastening thread (4) is provided, which is connected at least at one of its two ends (5; 6) to the thread (3) and runs loosely.
