Abstract (en)
[origin: WO2020011843A1] The invention relates to a device for supporting the locomotion of a user, in particular for stride variation, having a reservoir, a transmission region and a chamber, wherein the reservoir is designed to be subjected to pressure, and the transmission region is designed such that a pressure wave issuing from the reservoir is transmitted by the transmission region into the reservoir. The invention further relates to a shoe with at least one upper part, made of at least one upper material, and with a sole, wherein at least one device according to the invention is or can be arranged in the region of the sole.
