Abstract (en)

[origin: SE1830200A1] Disclosed is a water treatment system for removing contaminants from contaminated water. The system comprises a wheel washing arrangement for cleaning wheels of vehicles using water, and a water treating arrangement operatively coupled to the wheel washing arrangement for removing contaminants from contaminated water discharged from the wheel washing arrangement. The water treating arrangement comprises a flocculation chamber for allowing removal of the contaminants from contaminated water by flocculation, wherein the flocculation chamber includes a water outlet, a flocculation powder regulation device for introducing a controlled amount of flocculation powder into the flocculation chamber, a filtration tank operatively coupled to the flocculation chamber for filtering the flocculation powder mixed contaminated water discharged through the water outlet, and a drainage unit operatively coupled to the filtration tank for discharging water filtered by the filtration tank.
