Abstract (en)
[origin: WO2019243196A1] The invention relates to a cover plate (4, 5) for use in a CVD reactor, wherein the cover plate has a circumferential edge extending on a circular arc line, or wherein a plurality of identically configured cover plates (4) can be arranged in a circle such that their outer edges extending along circular arcs complement each other to form a complete circle. Storage spaces for substrates (10) or substrate holders supporting substrates (10) are located within the surface of the cover plate. According to the invention, the cover plate has openings (15) which are open to their two sides pointing away from one another and through which the upper side (3) of the susceptor (2) can be seen, so that an optical temperature measurement can be carried out through the opening (15).
