Abstract (en)
[origin: CA3100578A1] In the method for inspecting a container inspection plant having at least two detection devices, the at least two detection devices are designed to inspect a first and a second region of the container to be examined. A test container is fed to the container inspection plant. The test container has a test feature in a first region to be examined, and a marking in a second region to be examined, which is read by the detection device and by which the test container can be identified as a test container. The invention also relates to a test container for use in the method according to the invention.
