Abstract (en)

[origin: WO2019242975A1] A method (10, 30, 40) for agreeing cooperation between a first system (11) and a second system (12), characterised by the following features: - assumptions of the first system (11) regarding the second system (12) and guarantees of the first system (11) with respect to the second system (12) are sent (14) by the first system (11), - assumptions of the second system (12) regarding the first system (11) and guarantees of the second system (12) with respect to the first system (11) are sent (15) by the second system (12), - if the reciprocal assumptions and guarantees match one another, a digital security contract is concluded between the first system (11) and the second system (12) and - the security contract is documented in a transaction database (13).
