Abstract (en)
[origin: WO2019243931A1] The invention relates to a cooking appliance (10a-d; 10f-g; 10i), in particular an induction oven appliance, comprising at least one heating unit (12a-d; 12f-g; 12i), which has at least one induction coil (14a-d; 10f-g; 10i) having at least one electrical conductor (16a-d; 16f-g; 16i), at least one substrate unit (18a-d; 18f-g; 18i) and at least one fastening unit (20a-d; 20f-g; 20i), which fastens the induction coil (14a-d; 4f-g; 14i) to the substrate unit (18a-d; 18f-g; 18i). In order to increase the robustness and cost efficiency, it is proposed that the fastening unit (20a-d; 20f-g; 20i) fastens the conductor (16a-d; 16f-g; 16i) in at least one region on the substrate unit (18a-d; 18f-g; 18i) so as to be movable relative to the substrate unit (18a-d; 18f-g; 18i).
