Abstract (en)

[origin: EP3812449A1] Disclosed are a software for analyzing images of a fertilized egg, the software providing a means for executing a process including: (a) a step of measuring the difference in area between the female pronucleus and the male pronucleus from images of a fertilized egg obtained in a period of 1 to 10 hours before the time of occurrence of male and female pronuclear membrane breakdown as a reference; (b) a step of measuring the difference in are between the female pronucleus and the male pronucleus from images of the fertilized egg obtained immediately before the time of occurrence of malend female pronuclear membrane breakdown as the reference; and (c) a step of storing the measured values of the area difference obtained in the step (a) and the area difference obtained in the step (b), to be readable at any time as needed, and an apparatus incorporating this software.
