Abstract (en)  
[origin: EP3812663A1] An air conditioner is provided, which includes a base part (10), and a driving box (20) or a driving support (30), wherein the driving box (20) and the driving support (30) are both selectively mounted on the base part (10) by mounting portions which are structurally consistent, so that during assembly, two kinds of air guide plates, i.e. a fully closed air guide plate (60) and a non-fully closed air guide plate (70), can be quickly switched and mounted on a same base part (10), thereby reducing a development costs of an air conditioner product, shortening a product development cycle and improving product development efficiency.
