Abstract (en)
The invention relates to an archery finger tab that can reduce awkwardness while an archer draws and releases the bowstring and support an archer's hand that draws a bowstring. A characteristic configuration of the invention includes an archery finger tap comprising: a body part (12) that has a plate shape one surface of which face a palm and has a first guide rail (16), having a length in a forward-rearward direction, formed at a rear part thereof; a mount (18) that has a plate shape, is guided or fixed/unfixed by a first fastening part (20) with respect to the first guide rail, is rotatable about the first fastening part, and is provided with a first hinge part (24) disposed in the forward-rearward direction at a lower part; and a little finger support (28) that has a plate shape, is provided with a second hinge part (30) on an upper side thereof, is fixed or unfixed by a second fastening part (32) in a state where the first hinge part and the second hinge part are disposed in a straight line, and is rotatable about the second fastening part.
