Abstract (en)

[origin: CN112713419A] The invention relates to a connection device (1) for connecting an electrical line (2), comprising an electrical conductor (13) and a contact element (11). The contact element can be transferred from an open position into a contact position in order to bring the electrical line (2) into contact with the electrical conductor (13). In this case, a rocker element (12) which is rotatably held on the at least one bearing (117) is provided, the rocker element is designed to hold the contact element (11) in the open position in a holding position and the rocker element can be brought from the holding position into a release position by the action of the electrical conductor (2) in order to release the contact element (11) for transfer into the contact position.
