Abstract (en)

[origin: WO2020002395A1] The invention relates inter alia to a method comprising the following: acquiring at least one piece of acceleration information indicative of a course of measured acceleration values; determining at least one piece of evaluation information at least partially based on the acquired acceleration information, wherein the determination of the evaluation information includes establishing whether one or more characteristic actions has been performed by a user, and if this is the case, the following is carried out: storing a piece of action information representing the one or more actions, which is included in the determined evaluation information or forms at least part of the determined evaluation information; and outputting or initiating the output of the determined evaluation information. The invention also relates to a device for implementing and/or controlling said method, to a system comprising one or more devices for implementing and/or controlling said method, and to a computer program for implementing and/or controlling said method by means of a processor.
