Abstract (en)  
[origin: WO2020023300A1] Disclosed are therapeutic payloads comprising p97 fragments coupled with active agents having blood-brain barrier (BBB) transport activity, including variants and combinations thereof, to facilitate delivery of therapeutic or diagnostic agents across the BBB. The therapeutic payloads can be effective in the treatment of conditions which involve the lymphatic system of the subject, and may also present a disease state in the brain of the subject. Methods of treating diseases involving the lymphatic system and pharmaceutical compositions are also disclosed.
